EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Christopher Trainor on 8/29/07.

The application has been amended as follows:

Claim 7:

A safety device comprising:

a needle receiving portion;

a sheath portion including first and second legs, the first and second legs having proximal ends supported by the needle receiving portion and distal ends spaced from the needle receiving portion, the first and second legs being movable from a first position in which the distal ends of the first and second legs are spaced from the needle receiving portion a first distance to a second position in which the distal ends of the first and second legs are spaced from the needle receiving portion a second distance, wherein the first distance is greater than the second distance; and

a trigger supported adjacent to and movable independently of the proximal ends of the first and second legs, wherein the trigger is movable into sliding engagement with the first and second legs to move the first and second legs from the first position to the second position.

Claim 22:

A safety device comprising:

Art Unit: 3763

a needle receiving portion;

a sheath portion extending distally from the needle receiving portion, the sheath portion including first and second legs; and

a trigger supported adjacent to and movable independently of a proximal end of the first and second legs; wherein the sheath portion is movable from an extended position in which the first and second legs shield a distal end of a needle positioned within the needle receiving portion to a primed position in response to movement of the trigger into sliding engagement with the first and second legs, wherein the sheath portion is configured such that in the extended position a longitudinal force acting on a distal end of the sheath portion maintains the sheath portion in the extended position and in the primed position a longitudinal force acting on the distal end of the sheath portion urges the sheath portion to a retracted position in which the distal end of the needle is exposed.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The subject matter of the independent claims could either not be found or was not suggested in the prior art of record. The subject matter not found for claims 7, 22 was a safety needle device that has a sheath portion made of two hinged legs that separate to expose a needle and come together to enclose the needle, and a trigger that acts as an actuator to separates the two legs. The trigger is a different element then the sheath and doesn't need to move in accordance with the sheath and two legs. Claims 15, 28, 31 claim the same basic concept and also include a resilient member to provide a biasing force to keep the sheath and legs closed.

Art Unit: 3763

The independent claims also include other patentable subject matter in combination with the other elements or steps of the claim not mention in the above paragraph.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew F. DeSanto whose telephone number is 571-272-4957. The examiner can normally be reached on Monday-Friday 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nick LUCCHESI can be reached on (571) 272-4977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
